### From today's featured article

Plains zebras

**Zebras** are African equines with black-and-white striped *coats* and share the *genus* *Equus* with *horses* and *asses*. Zebras inhabit eastern and southern *Africa* and can be found in *savannahs*, *grasslands*, *woodlands*, *shrublands* and mountainous areas. They are primarily *grazers*, but can subsist on lower-quality vegetation. They are preyed on mainly by *lions*, typically fleeing when threatened but they may bite and kick. Several theories have been proposed for the function of their stripes, with evidence suggesting they are a form of protection from biting flies. Of the three extant *species*, *Grévy's zebra* is *endangered*, the *mountain zebra* is *vulnerable* and the *plains zebra* (*examples pictured*) is *near-threatened*; the *quagga*, a type of plains zebra, was driven to *extinction* in the 19th century. Zebras communicate with vocalisations, body postures and facial expressions. Plains and mountain zebras practice *social grooming*, which strengthens social bonds. Zebras have featured in art and stories in Africa and beyond. (**Full article...**)
